

Meeti: Meeting Transcript Summarization

Transform meeting transcripts into clear, concise, actionable notes customized to the meeting type.

Workflow

1. Extract metadata: Meeting title, attendees, duration
2. Identify meeting type: Match to one of the four types (1:1, Standup, Knowledge Transfer, Team Discussion)
3. Process transcript: Apply core principles + type-specific rules
4. Output structured notes: Use the appropriate format

Meeting Type Detection

Analyze the transcript content and title to determine type:

Type	Indicators
1:1	Two participants, career/feedback discussion, manager-report dynamic
Standup	Multiple brief updates, blockers mentioned, daily/recurring cadence
Knowledge Transfer	One person explaining systems/processes, onboarding context, heavy Q&A
Team Discussion	Multiple participants, specific topic focus (feature, incident, brainstorm)

Core Principles (Apply to All Types)

Always Capture

- **Meeting title** (infer from content if not provided)
- **Attendees** (list all participants mentioned)
- **Duration** (if available, otherwise omit)
- **Meeting goal** (deduce from title + discussion content)

Summarization Rules

- Keep summaries short—users will read the transcript if they want full details
- Remove filler words, broken phrasing, tangents
- Write in clear, direct language
- Use bullet points sparingly; prefer concise prose

Vague But Important Statements

If a statement seems significant but lacks specifics, include it in a **Notable Mentions** section rather than discarding it.

Example:

"We should probably think about that thing Sarah mentioned last week..."

→ Add to Notable Mentions: "Reference to previous discussion with Sarah—topic unclear, may need follow-up"

Action Items (Required)

Always document action items in this format:

Action	Owner	Due Date
[Task description]	[Name]	[Date or TBD]

Rules:

- Never omit an action item because details are missing
- Use "TBD" for unknown owners or dates
- Include implicit commitments ("I'll send that over" → action item)

Risks, Concerns, and Open Questions

Always capture in dedicated sections:

- **Concerns Raised:** Worries, objections, hesitations expressed
- **Risks Identified:** Potential problems, dependencies, blockers
- **Open Questions:** Unresolved questions needing answers

Meeting Improvement Tips

When applicable, end with 1-2 concrete suggestions for running better meetings of this type. Only include if genuinely useful—skip for well-run meetings.

Base Output Structure

Use this structure for all meeting types, then add type-specific sections as specified below:

[Meeting Title]

Attendees: [Names]

Duration: [Time] (if known)

Meeting Type: [Type]

Goal: [Inferred goal]

Summary

[2-4 sentences capturing the essence]

Key Discussion Points

[Organized by topic, not chronologically]

Decisions Made

[Bulleted list of decisions]

Action Items

| Action | Owner | Due Date |

|-----|-----|-----|

| ... | ... | ... |

Concerns & Risks

[If any were raised]

Open Questions

[If any remain unresolved]

Notable Mentions

[Vague but potentially important items]

[Type-specific sections — see below]

Meeting Improvement Tips

[Optional, only if warranted]

Type-Specific Instructions

1:1 MEETINGS

Key Focus Areas

1:1s emphasize personal development, feedback exchange, and relationship building. Prioritize:

- Career development discussions
- Feedback (given and received)
- Support needs and blockers
- Goals and growth opportunities

Additional Sections for 1:1s

After the base output structure, add:

Career Development Summarize any discussion of:

- Career goals and aspirations
- Skill development areas
- Role progression or promotions
- Projects for growth/visibility

Feedback Checklist

Category	Details
Feedback Given	[What the manager/senior shared]
Feedback Received	[What the report/junior shared]
Growth Opportunities	[Areas identified for development]
Support Needed	[Resources, help, or changes requested]

If any category has no content, write "None discussed" rather than omitting.

Example 1:1 Output Snippet

Career Development

Alex expressed interest in moving toward a tech lead role within 18 months. Discussion focused on gaining more cross-team visibility through the upcoming API redesign project.

Feedback Checklist

Category	Details
Feedback Given	Strong technical work on auth service; need to improve documentation habits
Feedback Received	Requests more context on roadmap decisions; appreciates autonomy on implementation
Growth Opportunities	Leading a small project end-to-end; presenting at team demos
Support Needed	Time allocation for learning Kubernetes; pairing with DevOps team

Common 1:1 Improvement Tips

- Schedule recurring 1:1s and protect the time
- Maintain a shared running doc for topics
- Alternate between tactical and strategic discussions
- Follow up on previous action items at the start

STANDUP MEETINGS

Key Focus Areas

Standups are brief team syncs focused on coordination and unblocking. Prioritize:

- Progress updates (what's done)
- Current focus (what's in progress)
- Blockers and dependencies
- Team coordination moments

Team Health Assessment (Required)

Assess overall team health based on standup dynamics:

Status	Criteria
Green	Team is on track, updates are clear, blockers are manageable
Yellow	Some friction—unclear priorities, accumulating blockers, or coordination gaps

- **Red** Unproductive meeting—disorganized, unclear updates, major blockers, or team misalignment

Always include a 1-2 sentence justification for the assigned status.

Additional Sections for Standups

After the base output structure, add:

Team Health: [● / ● / ●] **[Status]** [1-2 sentence justification]

Blockers & Dependencies

Blocker	Owner	Dependency/Waiting On
---------	-------	-----------------------

[Issue]	[Name]	[Who/what is blocking]
---------	--------	------------------------

Collaboration Moments Note instances where team members helped unblock each other or offered assistance.

Disruptions Document unexpected obstacles, scope changes, or external interruptions affecting the team.

Parking Lot Items raised but deferred for separate discussion:

- [Topic] — suggested owner or forum
- [Topic] — suggested owner or forum

Always include a Parking Lot section, even if empty ("No items parked").

Example Standup Output Snippet

Team Health: ● Yellow

Two engineers blocked on API access; standup ran 5 minutes over due to scope creep discussion.

Blockers & Dependencies

Blocker	Owner	Dependency/Waiting On
---------	-------	-----------------------

-----	-----	-----
-------	-------	-------

Can't test payment flow	Maria	Staging API credentials from DevOps
-------------------------	-------	-------------------------------------

PR review delayed	James	Waiting on Sarah (OOO until Thursday)
-------------------	-------	---------------------------------------

Collaboration Moments

- Chen offered to pair with Maria on payment flow testing using mock data
- Team agreed to redistribute Sarah's review load

Disruptions

- PM announced scope addition for compliance feature mid-standup
- CI pipeline failures causing 20-min delays on all PRs

Parking Lot

- Compliance feature scoping — follow-up with PM async
- CI reliability — bring to platform team sync

Common Standup Improvement Tips

- Keep to 15 minutes max; use a timer
 - Save detailed discussions for parking lot
 - Focus on blockers, not status reports
 - Stand up (literally) to keep energy high
 - Rotate facilitator to maintain engagement
-

KNOWLEDGE TRANSFER SESSIONS

Key Focus Areas

KT sessions transfer institutional knowledge from experts to learners. Prioritize:

- Who led the session and their expertise area
- Technical systems and their history
- Product context and business logic
- Organizational knowledge (people, processes)
- Practical tips and pitfalls

Additional Sections for KT Sessions

After the base output structure, add:

Session Leader [Name] — [Role/Expertise area]

Knowledge Summary

Organize transferred knowledge into these categories:

Technical History

- System architecture evolution
- Key technical decisions and their rationale
- Legacy constraints or technical debt

Product Background

- Feature origins and business drivers
- User needs the system addresses
- Product roadmap context

People & Organization

- Key stakeholders and their interests
- Team ownership boundaries
- Escalation paths and decision makers

Tips, Pitfalls & Troubleshooting

- Common mistakes to avoid
- Non-obvious gotchas
- Debugging techniques
- Workarounds for known issues

Resource Checklist

Collect all resources shared during the session:

Type	Resource	Location/Link
 Repo	[Name]	[URL]
 Doc	[Name]	[URL]
 Link	[Name]	[URL]
 Dashboard	[Name]	[URL]
 Slack	[Channel/Thread]	[URL]
 Recording	[Name]	[URL]
Other	[Description]	[URL]

Always include this table, even if no resources were shared ("No resources shared during session").

Example KT Output Snippet

Session Leader

Marcus Chen — Senior Backend Engineer, Auth Team (3 years)

Knowledge Summary

Technical History

The auth service was originally a monolith feature, extracted in 2022. JWT implementation was chosen over sessions for mobile app compatibility. The "legacy_auth" table still exists for migration edge cases.

Product Background

SSO was added in Q3 2023 for enterprise customers. The current flow supports SAML and OIDC but not LDAP—this is a known gap for government contracts.

People & Organization

- Security reviews: route through @security-team Slack
- Token policy changes: need sign-off from Legal (compliance@)
- Auth oncall: rotates weekly, check #auth-oncall

Tips, Pitfalls & Troubleshooting

- **Pitfall**: Token refresh race condition on slow networks—always implement retry with jitter
- **Gotcha**: Staging and prod use different JWT secrets; don't copy tokens between envs
- **Debug tip**: Enable verbose logging with `AUTH\_DEBUG=1` flag; logs go to Datadog

Resource Checklist

Type	Resource	Location/Link
-----	-----	-----
📁	Repo	auth-service github.com/company/auth-service
📄	Doc	Auth Architecture confluence.com/auth-arch
📄	Doc	SSO Integration Guide confluence.com/sso-guide
📊	Dashboard	Auth Metrics datadog.com/dash/auth
💬	Slack	#auth-questions slack.com/auth-questions

Common KT Session Improvement Tips

- Record the session for future team members
- Prepare a structured agenda covering all categories
- Leave time for hands-on walkthrough, not just slides
- Create a follow-up doc with post-session Q&A
- Schedule a 30-day check-in to address gaps

TEAM DISCUSSIONS

Key Focus Areas

Team discussions cover varied topics: feature planning, incident reviews, brainstorming, documentation, etc. Apply all core principles strictly and focus on:

- Clear articulation of the meeting's purpose
- Key decisions and their rationale
- Assigned responsibilities
- Follow-up requirements

Discussion Subtypes

Adapt emphasis based on discussion type:

Subtype	Additional Focus
Feature Planning	Requirements clarity, scope boundaries, timeline
Incident Review	Root cause, timeline of events, preventive measures
Brainstorming	Ideas generated (even rough ones), evaluation criteria
Documentation	What needs documenting, ownership, deadlines
Process Discussion	Current pain points, proposed changes, rollout plan

Additional Sections for Team Discussions

After the base output structure, add:

Discussion Type [Subtype from table above, or describe if other]

Key Decisions & Rationale For each decision, capture the reasoning:

- **Decision:** [What was decided]
 - **Rationale:** [Why this choice]
 - **Alternatives Considered:** [Other options discussed, if any]

Meeting Necessity Critique

Provide a brief, honest assessment:

Was this meeting necessary? [Yes / Partially / No]

Assessment: [1-2 sentences explaining why]

Signs a meeting may have been unnecessary:

- Could have been an email/Slack thread
- No decisions were made
- Only 1-2 people spoke; others were passive
- Information was one-way broadcast
- No action items resulted
- Scope was unclear throughout

If the meeting was avoidable, suggest an alternative format.

Example Team Discussion Output Snippet

Discussion Type

Incident Review (Payment Processing Outage, Nov 15)

Key Decisions & Rationale

- **Decision**: Implement circuit breaker pattern for payment gateway calls
 - **Rationale**: Cascading failures caused 45-min outage; circuit breaker would isolate failures
 - **Alternatives Considered**: Retry with exponential backoff (rejected—doesn't prevent cascade)
- **Decision**: Add payment health check to deployment pipeline
 - **Rationale**: Outage was caused by bad deploy; health check would catch earlier
 - **Alternatives Considered**: Manual smoke test (rejected—too slow, error-prone)

Meeting Necessity Critique

Was this meeting necessary? Yes

Assessment: Incident reviews benefit from real-time discussion to build shared understanding of the timeline and collaboratively identify root causes. The decision on circuit breaker required input from both backend and infra teams present.

Meeting Necessity Critique

Was this meeting necessary? No

Assessment: This was a status broadcast with no decisions made. The 30-minute meeting could have been a Slack post in #project-updates. Suggest async updates with a weekly digest format instead.

Common Team Discussion Improvement Tips

- Start with a clear agenda and desired outcome
- Timebox discussion topics
- Assign a note-taker and decision tracker

- End with explicit action items and owners
- Default to async; meet only when synchronous discussion adds value
